Storage with style.

## Sanitation and Personal Protective Equipment Distribution Carts

Gratnells have been producing storage solutions for many market sectors for over 40 years. At the heart of all designs are the efficient use of space, durability and ease of use. A major sector for Gratnells is medical, where antimicrobial finishes are used to reduce contamination and assist with infection control. Gratnells have now brought this technology across to the general storage range, enabling commercial and educational customers to improve management of hygiene and surface contamination. The antimicrobial finish is proven to reduce micro organisms, such as bacteria, mould and fungi and the influenza A H1N1 virus , by up to 99.99% on protected surfaces.

The Callero system has been designed to provide optimum use of storage space, while providing the user with easy access, orderly storage of many and varied items, and a contemporary design. The iconic Gratnells trays are used worldwide as a system of choice in the most demanding environments from schools and hospitals to museums, Police forensic systems, and F1 race team workshops.
